### Note:

- \* Dynamic Pixel Shift Resolution is not currently supported. When you open images that are captured in this mode, only the first raw image frame is displayed.
- † The following limitations are specific to camera support for the Pentax K-3 II:
  - Pixel Shift Resolution (PSR) mode was added in this release. Use a tripod and a two-second timer to minimize motion artifacts when in PSR mode.

- Images created with the in-camera HDR mode are not supported in ACR and Lightroom. To shoot multi-capture HDR in raw mode, shoot separate files and merge to HDR using the ACR/Lightroom Merge feature. See [HDR photo merge](#) to learn more about merging files in Lightroom.
